Networks

When you buy a new computer, the first thing you'll probably try to do is connect to the Internet. To do this, you establish a connection to your router, which receives the data from the Internet and then forwards it to the computer. Of course that's not all: Next, you could also connect your printer, smartphone or TV to the router so that these devices are also connected to the Internet. Now you have connected different devices to each other via a central access point and created your own network.

What Is Network

A network is defined as a group of two or more computer systems linked together

Types Of Network

- Local-area networks (LANs): The computers are geographically close together (that is, in the same building).
- Wide-area networks (WANs): The computers are farther apart and are connected by telephone lines or radio waves.
- Campus-area networks (CANs): The computers are within a limited geographic area, such as a campus or military base.
- Metropolitan-area networks (MANs): A data network designed for a town or city.
- Home-area networks (HANs): A network contained within a user's home that connects a person's digital devices.

Science Exhibition

Theme	
Science And Technology	<ul style="list-style-type: none">• Advancement in information and communication technology• Eco-Friendly Materials• Health and Cleanliness• Transport and Innovation• Environmental Concerns• Historical Development with Current Innovation• Mathematics for Us

Rules And Regulation:

- The teams would be required to submit the details of their respective projects (title, description, list of materials used, images, video) on the portal using their unique login credentials within the time-frame for submission
- The screening of the entries would be done before the regional/national level exhibitions.
- Care should be taken to use eco-friendly materials in the preparation of exhibits.
- The participating team would bear all expenses related to participation in the event.
- Proper discipline shall be maintained
- Teams shall be fully prepared for their project presentation
- Any kind of misbehaviour would not be appreciated
- No live animals. Participants may include pictures on their board or videos instead of bringing a live animal to the fair.
- No volcanoes or other erupting projects.
- If your project is messy (dirt, crumbs, etc.), bring your own plastic sheeting for quick cleanup.
- All participants are responsible for cleaning up their area after the science fair is over.
- No internet is provided. Bring your own hotspot or download everything ahead of time if needed.
- Participants may have a video for their entry (for the whole entry or to supplement).
- No food or drinks are allowed. Water is allowed in enclosed water bottles only.
- No refunds. No exceptions.
- No tape on tables or floors.

```

TYPES OF LISTS

Unordered List

An unordered list defines a list of items in which the order of the items does not. Or in other words, unordered list tag is used to create a unordered list. It is also known as bulleted list. In unordered list each element in the list is defined using li tag.

Example of unordered list in default

- Sachin
- Manoj
- Parth
- sujay
- Amraditya

Ordered List

An ordered list defines a list of items in which the order of the items are matters. An ordered list is also called a number list. The ordering is given by a numbering scheme, using Arabic numbers, letters, roman numerals. Or in other words, ordered list tag is used to create ordered list.

Example of ordered list in default

1. Sachin
2. Manoj
3. Parth
4. sujay

WATER POLLUTION

What is Water Pollution?

Water Pollution is the contamination of water bodies, usually as a result of human activities. Water bodies include for example lakes, rivers, oceans, aquifers and groundwater. Water pollution results when contaminants are introduced into the natural environment. For example, releasing inadequately treated wastewater into natural water bodies can lead to degradation of aquatic ecosystems. In turn, this can lead to public health problems for people living downstream. They may use the same polluted river water for drinking or bathing or irrigation. Water pollution is the leading worldwide cause of death and disease, e.g. due to water-borne diseases. The causes of water pollution include a wide range of chemicals and pathogens as well as physical parameters. Contaminants may include organic and inorganic substances. All plants and organisms living in or being exposed to polluted water bodies can be impacted. The effects can damage individual species and impact the natural biological communities they are part of.

Causes Of Water Pollution

- Nutrient pollution is caused by wastewater, sewage, and fertilizers. The high levels of nutrients in these sources end up in bodies of water and promote algae and weed growth, which can make the water undrinkable and depleted oxygen causing aquatic organisms to die.
- Pesticides and herbicides applied to crops and residential areas concentrate in the soil and are carried to the groundwater by rainwater and runoff. For these reasons anytime someone drills a well for water it must be checked for pollutants.
- Industrial waste is one of the main causes of water pollution, by creating primary and secondary pollutants including sulphur, lead and mercury, nitrates and phosphates, and oil spills.
- In developing countries around 70% of their solid waste is dumped directly into the ocean or sea. This causes serious problems including the harming and killing of sea creatures, which ultimately affects humans.

Conservation of Water Pollution

- Availability of water for future generations should be ensured, and the rate of consumption of water in the ecosystem should not exceed its replacement rate.
- Energy conservation: In some water management plants, most of the electricity is used in water pumping, delivery, and wastewater treatment. This consumption of energy must be minimised.
- Conservation of Habitat: Reducing personal use of water can help to preserve water for local wildlife and aquatic habitats. On the other hand, the construction of water diversion infrastructures such as dams should be reduced to some extent as it may disturb the local flora and fauna.
